

IT Asset Destruction & Recycling

Service & Security Focused - We pride ourselves in our aggressive response-time to customer inquiries and project removal scheduling, with offered dates and specific arrival times available within 2 weeks of a request. MBI provides realistic, but competitive, pricing up-front by providing detailed quotes with all of the potential variables which may affect pricing. MBI adheres to meticulous data security and waste-handling procedures in accordance with R2 standards.

Data Security – We employ data destruction methodology compliant with both DoD 5220.22-M (older) and NIST 800-88 (current) standards, which essentially write, wipe, and re-write over the entirety of a standard platter hard drive. Solid state drives, flash memory, and other storage mediums are wiped in accordance with a variety of proprietary manufacturer and industry standards. Any storage which cannot be validated as unrecoverable are wiped are physically destroyed and incinerated.

Environmental Standards – All waste sources received are recycled according to R2, ISO 14001, and ISO 45001 Standards.

ITAD Services
